EDUCATION

University of California, San Diego [UCSD] Expected Spring 2028
B.S. Artificial Intelligence
Relevant Coursework: Machine Learning, Deep Learning, Neural Networks, Artificial Intelligence, Data Structures, Algorithms, Linear Algebra, Probability, Systems Programming, Natural Language Processing
Leadership: Vice President, Alpha Lambda Mu | Education Committee, Muslim Tech Collaborative

EXPERIENCE

Chase USA International Inc. San Ysidro, CA
Artificial Intelligence Intern June 2026 - Present

- Architected and shipped a high-impact e-commerce storefront using Shopify, Liquid, HTML, CSS, and JavaScript (ES6+) — delivering **12** custom theme sections and enhanced product pages across **10+** production releases with well-documented, tested, and operable UI components; leveraged Claude API and Claude Code as iterative coding partners throughout the SDLC
- Shipped to production daily — storefront redesign drove a **27%** increase in website traffic and a **35%** increase in orders
- Built a ***Python data pipeline*** to migrate **115+** products from WooCommerce to Shopify with color-variant merging, size-run parsing, and deduplication logic — enabling employees to upload products quickly and reliably at scale
- Implemented a ***QR code system*** for trade show tags replacing manual handwriting, boosting operational efficiency by **20%** for vendors and buyers on the floor
- Reviewed, modified, and validated all Claude-generated code extensively before every production push — ensuring correctness, maintainability, and production readiness

Muslim Tech Collaborative San Diego, CA
Education Committee June 2026 - Present

- Designed and open-sourced a **Claude Code workshop** for UCSD students teaching them to orchestrate AI workflows using Claude Code, subagents, skills, and MCP integrations — including how to critically guide and review AI-generated code via a live end-to-end demo
- Built custom MCP servers, Claude skills, and AI agents from scratch to power the workshop — then guided UCSD students through building their own, giving them hands-on experience creating real AI tools they could use immediately

PROJECTS

RAG Interview Prep Study Buddy | Python, Claude API, ChromaDB, Sentence Transformers

- Designed and shipped an end-to-end distributed AI system — decoupled services spanning data ingestion, vector storage (ChromaDB), semantic retrieval, and LLM inference — validated with 187 automated tests across unit and integration layers
- Architected ML inference infrastructure for efficiency at scale — chunking, 384-dim embeddings, and semantic search run fully offline via sentence-transformers and ChromaDB; optimized cost to ~**$0.0013**/question and ~**$0.008**/graded answer
- Established evaluation benchmarks to drive measurable improvements — added cross-encoder reranking after metrics showed vector search alone surfaced the correct passage in only **5 of 9** test cases at **89 chunks**; reranking restored **8 of 9** at zero additional API cost — validated by **187 automated tests** (155 unit, 32 integration); models selected by measurement: Haiku for generation, Sonnet for grading

GrantMatcher | Python, Claude API, JavaScript, HTML, CSS

- Built at DiamondHacks Hackathon - shipped a consumer-facing full-stack React web application helping nonprofits discover grants that match their mission statement to help them fundraise more effectively
- Developed automated backend scripts and APIs to generate outreach emails and fundraiser content via prompt engineering; deployed as a scalable production web application on Vercel
- Collaborated with a team to architect and ship the application end-to-end in under **24 hours** using Claude AI as the development engine, demonstrating rapid AI-assisted prototyping under time pressure

Image Captioning with MS-COCO | Python, PyTorch, NumPy, NLTK

- Engineered a PyTorch deep learning pipeline on GPU infrastructure — RNN, GRU, and LSTM decoder architectures paired with a pretrained ResNet CNN encoder (transfer learning) for image captioning on MS-COCO, evaluated across **500** test samples using BLEU-1 through BLEU-4 and CIDEr metrics
- GRU achieved best performance with CIDEr score of **0.1763** and **36.8%** training loss improvement over **10** epochs on UCSD DataHub GPU
- Iteratively analyzed performance, complexity, and inference efficiency tradeoffs across RNN, GRU, and LSTM architectures; exercised strong judgment to select the optimal model by measurement

TECHNICAL SKILLS

Languages: Python, Java, C/C++, SQL, Mojo
Frameworks & Libraries: PyTorch, NumPy, Scikit-Learn, Pandas, Generative AI, LLM APIs, Prompt Engineering, OOP, Model Optimization, Supervised & Unsupervised ML, MCPs, Skills
Databases: PostgreSQL, MySQL, SQLite, ChromaDB (NoSQL vector store)
Tools & Platforms: Git, GitHub, VS Code, REST APIs, Linux, Claude API, Claude Code, Cursor, CI/CD

CERTIFICATIONS

Claude Code in Action – Anthropic
Claude Code 101 – Anthropic
